Recurring month-end expense-report corrections

This illustrative case study follows manual corrections to an operating expense report between April and September 2026. The synthetic dataset contains 55 adjustments and 17.6 hours of recorded preparation time.

Method

We compared initial and revised expenses by department, then examined adjustment frequency, recorded reasons and preparation time. Supporting records were used to investigate invoice timing, report duplication, account inclusion, department coding and expected utility estimates. Selected April and August examples illustrate these mechanisms.

Conclusions

Nine adjustments recur every month, with one additional correction in July. Together, they increase reported expenses by £41,280, approximately 1.3% of the initial total.

The net percentage conceals different types of work. Late approvals and postings leave invoices outside the initial extract. Report joins duplicate some contributions, an account is omitted from the report, and a coding template repeatedly allocates an expense to the wrong department. Utility estimates are authorised recurring adjustments.

These findings support targeted changes to reporting and working practices. They do not establish that all adjustments can be eliminated or quantify achievable time savings.

Proposed recommendations

1. Coordinate the month-end close.
2. Agree a working-day timetable for reviewing pending invoices, completing approvals and postings, resolving exceptions, closing the period and producing the final extract.
3. Correct reporting and coding configurations.
4. Review the duplicate-producing join, include the omitted account and amend the department coding template. Assign responsibility for testing, approval and implementation, then verify the next reporting cycle.
5. Retain necessary estimates and monitor results.
6. Continue authorised utility estimates and compare them with subsequent invoices when available. Explain revised procedures to staff and monitor recurring adjustment counts and preparation time.

- These recommendations have not been implemented or tested within this case study.

Recurring month-end expense-report corrections

The initial analysis covers how much is corrected, how long corrections take and total amounts of corrections.
We also look at how corrections affect the various departments in the business and how many corrections are made each month.

Department	Initial cost in GBP	Correction impact in GBP	Revised cost in GBP	Correction impact % of initial cost
Administration	791,135.63	-3,855.00	787,280.63	-0.49%
Sales support	806,228.54	375.00	806,603.54	0.05%
Transport	781,337.04	7,665.00	789,002.04	0.98%
Warehouse	789,299.94	37,095.00	826,394.94	4.70%
Total	**3,168,001.15**	**41,280.00**	**3,209,281.15**	**1.30%**

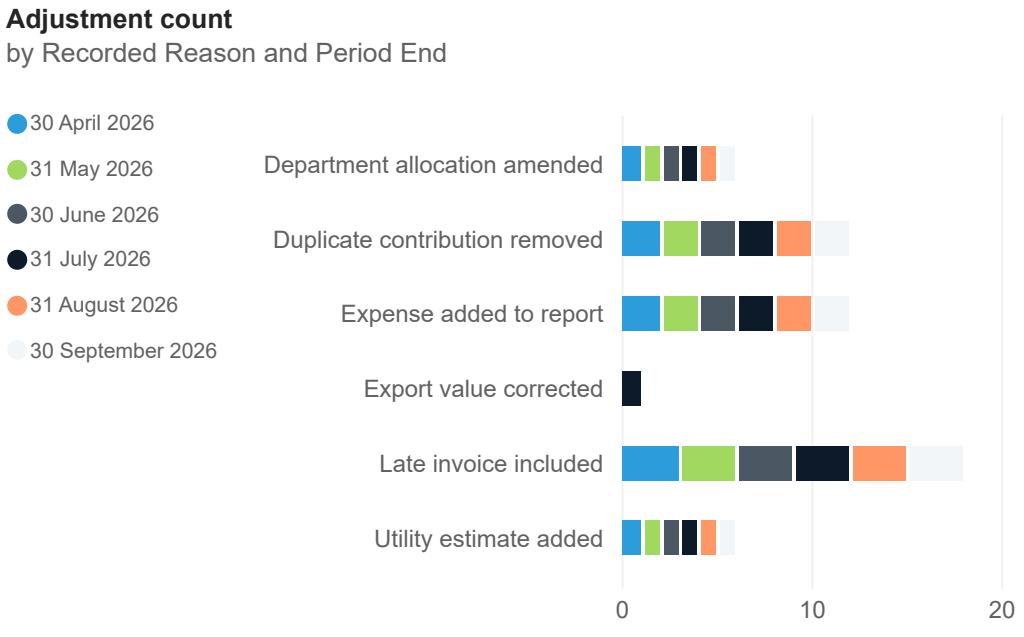

Period End ▲	Adjustment count	Correction hours
30 April 2026	9	2.85
31 May 2026	9	2.85
30 June 2026	9	2.85
31 July 2026	10	3.35
31 August 2026	9	2.85
30 September 2026	9	2.85

To prepare for that deeper investigation, we look at what the reasons are for corrections. The initial analysis examines how often corrections occur, their effect on reported expenses and the preparation time recorded against them.

The net correction increases reported expenses by £41,280, approximately 1.3% of the initial total. That percentage alone reveals little about the work involved: additions and reductions offset, while department reallocations have no net effect on the company total.
The frequency shows a consistent pattern. Nine adjustments recur every month, requiring 2.85 hours of preparation. July includes one additional export-value correction, bringing that month to ten adjustments and 3.35 hours.

Five recorded reasons appear in all six months. This repetition provides a starting point for investigation, but does not establish that every recurring adjustment is avoidable. The next step is to trace selected corrections to their supporting records and understand why they remain necessary.

Recorded Reason	Adjustment count ▼	Correction impact in GBP
Late invoice included	18	33,585.00
Duplicate contribution removed	12	-14,130.00
Expense added to report	12	7,650.00
Department allocation amended	6	0.00
Utility estimate added	6	13,725.00
Export value corrected	1	450.00
Total	**55**	**41,280.00**

The deeper analysis looks at what explains the recurring corrections, which are necessary, and what changes to reporting, working practices or staff guidance could reduce avoidable rework?

Recurring month-end expense-report corrections

Before attributing cause to individuals, we take a closer look at types of corrections . Some recurring corrections could be expected, such as budget-to-actual amendment of utility costs. Other corrections could possibly be prevented by a correction of system/report configuration or improving procedures.

Department	Record Type	Observation	Evidence Code	Impact in GBP	Boundary
Transport	Invoice workflow review	Three recurring supplier invoices were received before extraction but approved and posted afterwards. Approval inbox reviewed after the report run.	E02	15630	Check approval routing, cover and report timing before attributing cause to an individual.
Warehouse	Close procedure	Monthly utility estimate is an authorised report-only accrual pending invoice. Record estimate and approval each month.	E06	13725	Recurring adjustment is expected. This case study does not include subsequent settlement or reversal.
Warehouse	Invoice workflow review	Three recurring supplier invoices were received before extraction but approved and posted afterwards. Approval inbox reviewed after the report run.	E02	11865	Check approval routing, cover and report timing before attributing cause to an individual.
Warehouse	Coding instructions review	An active template codes a recurring site cost to D04. Approved allocation on each invoice specifies D01.	E05	8100	Template instruction remains unchanged at September snapshot.
Sales support	Invoice workflow review	Three recurring supplier invoices were received before extraction but approved and posted afterwards. Approval inbox reviewed after the report run.	E02	6090	Check approval routing, cover and report timing before attributing cause to an individual.
Administration	Report configuration review	Account A699 is absent from the expense-report account inclusion list. Source costs remain present in the expense register.	E03	4245	Configuration version EXP_1.4 used for all six extracts. No implementation evidence of a fix.
Warehouse	Report configuration review	Account A699 is absent from the expense-report account inclusion list. Source costs remain present in the expense register.	E03	3405	Configuration version EXP_1.4 used for all six extracts. No implementation evidence of a fix.
Transport	Report export incident	A single line was keyed incorrectly in an export staging file. Signed correction restores the source amount.	E07	450	One-off incident in July. No evidence of repetition in this dataset.
Sales support	Report join review	Freight enrichment joins SupplierID to a contact table. Two suppliers each have two active contacts, producing two contribution rows for affected lines.	E04	-5715	Check row counts and grain before changing source invoices.
Administration	Coding instructions review	An active template codes a recurring site cost to D04. Approved allocation on each invoice specifies D01.	E05	-8100	Template instruction remains unchanged at September snapshot.
Transport	Report join review	Freight enrichment joins SupplierID to a contact table. Two suppliers each have two active contacts, producing two contribution rows for affected lines.	E04	-8415	Check row counts and grain before changing source invoices.
Total				**41280**	

Recurring month-end expense-report corrections

Following the analysis of Evidence Codes and impact, a further analysis is applied to duplication, late invoice additions and total departmental corrections. The below visuals only reflect corrections for the April and August month-ends.

Late invoice addition

SourceLineID	Received Date	Approved Date	Posted Date	Extract Timestamp	Recorded Reason
EXP0001	01 May 2026	06 May 2026	07 May 2026	05/05/2026 09:00:00	Late invoice included
EXP0002	01 May 2026	06 May 2026	07 May 2026	05/05/2026 09:00:00	Late invoice included
EXP0003	01 May 2026	06 May 2026	07 May 2026	05/05/2026 09:00:00	Late invoice included
EXP1201	01 September 2026	03 September 2026	04 September 2026	02/09/2026 09:00:00	Late invoice included
EXP1202	01 September 2026	03 September 2026	04 September 2026	02/09/2026 09:00:00	Late invoice included
EXP1203	01 September 2026	03 September 2026	04 September 2026	02/09/2026 09:00:00	Late invoice included

Expected corrections

Evidence Code	Department	Period	Initial cost in GBP	Correction impact in GBP	Observation ▲
E06	Warehouse	01 April 2026		2,100.00	Monthly utility estimate is an authorised report-only accrual pending invoice. Record estimate and approval each month.
E06	Warehouse	01 August 2026		2,400.00	Monthly utility estimate is an authorised report-only accrual pending invoice. Record estimate and approval each month.
Total				**4,500.00**	

Invoice timing — E02
The selected invoices were received before extraction but approved and posted afterwards. This supports reviewing approval routing, capacity and the close timetable. Delaying extraction alone would need testing against actual processing dates.

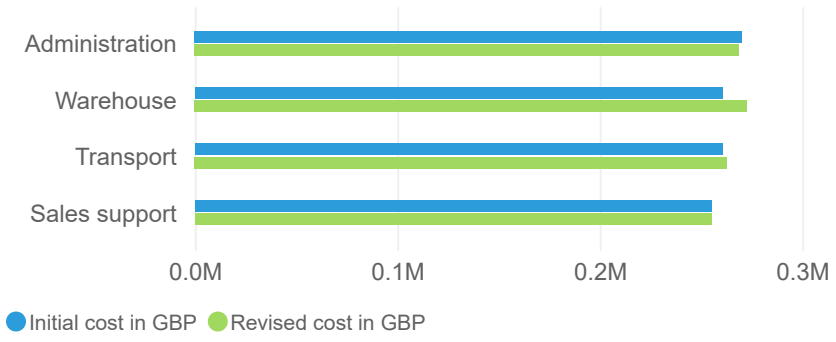

Report duplication — E04
Each selected source line contributes twice to the initial report. The supporting evidence identifies a supplier-contact join that expands one expense line into multiple report rows. The proposed remedy is to correct the join and verify source-line counts and amounts.

Department coding — E05
Across six months, £8,100 is transferred from Administration to Warehouse. The active coding template conflicts with the approved invoice allocation. The template remains unchanged at the September snapshot.

Account inclusion — E03
Account A699 is absent from the report inclusion list, requiring £7,650 of additions across six months. The same report configuration remains in use. Review and test the inclusion rules before the next reporting cycle.

Expected estimates — E06
The selected April and August utility estimates total £4,500. These are authorised report-only accruals awaiting invoices. Subsequent invoices would be needed to assess estimate accuracy; they are outside this dataset.

Initial cost in GBP vs Revised cost in GBP
